

Dr. Geo. W. Carver.
speaks on
pp The Inside of a Peanut 99

Dr. Carver is one of the most romantic figures in American life - born in slavery - stolen - traded for a race horse - struggled for an education - student of music and art at Simpson College - B.S. and M.S. from Iowa State College -

Discovered by Booker T. Washington - called to Tuskegee - a wizard in agricultural chemistry - made a member of the Royal Arts Society of London - winner of the Spingarn Medal in 1923 - asked by Edison to work with him on rubber experiments - remains in the Southland where his interest is -

To his creative touch,

The peanut has yielded 267 products
The sweet potato, 118 products
Red Alabama clays, many hues of paint
Vegetation, a thousand dyes
AND, many other products have become
valuable to man through the laboratory
work of this remarkable man.

Dr. Carver will bring his PEANUT EXHIBIT to Bucknell for the evening lecture, which will be inspirational, and non-technical.

He will meet with chemistry students in the laboratory at 10:00 Monday morning.
